Art Unit: 2182

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-2, 6, 10-16, 21-23, drawn to DMA transfer termination and retransmission, classified in class 710, subclass 59.
 - II. Claims 3-5, 7-11, 17-20, drawn to DMA with normal and descriptor mode, classified in class 710, subclass 24.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions DMA transfer termination and retransmission and DMA with normal and descriptor mode are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention DMA with normal and descriptor mode has separate utility such as descriptor mode transfer linking packets without transfer interruption. See MPEP § 806.05(d).

3. Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group II, restriction for examination purposes as indicated is proper.
